

Frequently Asked Questions:

Q. The product developed will be specifically used during the travel
OR we can design any product whose idea should be inspired or generated
while traveling.

It is upto you. There aren't any restrictions; it's totally your interpretation, whether you want to use the product while traveling or just get inspired by the concept of 'travel'. However, there should be an explanation about your thought process in the write up.

Q. Is there any restriction for the size of designed product?, should that also fit within 1 ft cubic vol. Scale of designed product?

No restriction in terms of scale and size. But, you should use the whole wood without any wastages.

Q. The Final product designed should be made only of wood or it can be supported by rubber, fabric and other materials keeping wood as a basic and major material.

*Please make sure you use wood as the main component.
Small auxiliary materials like – nails etc used to join the product, can be used but not fabric or the others mentioned above.*

Q. Can designed product be a set of stuffs or is it necessary to be a single unit only, for ex. can it be a set of kitchen utilities etc...

It can be a set.

Q. Can we send more than one design solution in a single submission?

You can address many problems in a single product, i.e have many design solutions in one product. However, do not send this as separate submissions. If possible make a set (like in the previous question) or send it individually.

Q. Can my designed product have support of something i.e. lean or dependent on something. It works along with the bicycle as an accessory of it or it works when it is attached to the wall as a shelf, OR it has to be a self standing single structure?

Yes it can have a support of something.

Q. Can i use any other element apart from nails for joining the pieces like a string and other small metallic joints in my case.

Yes.
